**I. FACTS:**

This action arises out of a motor vehicle accident that occurred on the eastbound, Upper Level of the George Washington Bridge at approximately 12:40 a.m. on Monday, May 9, 2007. The nature and extent of plaintiff's alleged injuries is disputed amongst the parties.

By letter dated May 6, 2008 plaintiff's counsel identified Ramesh K. Babu, M.D as an expert in this matter. (See Exhibit "A"). To date, Dr. Babu has not issued a comprehensive narrative expert report. Instead, he has simply issued periodic status reports to GEICO, plaintiff's no-fault insurer. (See Exhibit "B") A review of his October 1, 2007 report reveals that Dr. Babu concluded with respect to causation: "To the best of my ability, I feel there is a causal relation between the accident and the current condition." (See Exhibit "C")

On December 10, 2007, Dr. Babu re-evaluated Lee and noted that Lee's Past medical history was "non contributory." His physical examination yielded nearly identical findings to his pre-surgical examination. Dr. Babu eventually recommended that Lee gradually increase her activities of daily living and perform physical therapy.

Dr. Babu provided no further clarification as to causation, nor did Dr. Babu provide a definitive prognosis or opinion as to whether or not Lee's condition(s) are permanent (See Exhibit "D").

On February 15, 2008 Dr. Babu issued a nearly identical follow-up report. Again, Dr. Babu provided no further clarification as to causation, nor did Dr. Babu provide a definitive prognosis or proffer an opinion as to whether or not Lee's condition(s) are permanent (See Exhibit "E").

Furthermore, at the June 10, 2008 status conference before Your Honor, plaintiff's counsel represented to the Court that he did require any extensions of the discovery deadlines. Therefore, the deadline for the exchange of expert reports has elapsed without plaintiff furnishing updated reports by Dr. Babu providing a more definitive statement regarding causation or providing a definitive prognosis as to whether or not Lee's condition(s) are permanent .

## II. LEGAL ARGUMENT

Federal Judicial Procedure Rule 26(a)(2)(B), governing the issuance of written expert reports, states in pertinent part:

Unless otherwise stipulated or ordered by the court, **this disclosure must be accompanied by a written report**—prepared and signed by the witness—if the witness is one retained or specifically employed to provide expert testimony . . . The report **must** contain (i) a complete statement of all opinions the witness will express and the basis and reasons for them; (ii) the data or other information considered by the witness in forming them; (iii) the data or other information considered by the witness in forming them; . . .” (emphasis added).

As outlined above, the time for the parties to exchange expert reports was June 15, 2008, which came and went without plaintiff requesting an extension or serving an expert report.

In addition, Federal Rule of Civil Procedure 26(a)(2)(B) subparts (i)-(vi) requires the following additional expert disclosures, as follows:

- (i) a complete statement of all opinions the witness will express and the basis and reasons for them;
- (ii) the data of other information considered by the witness in furnishing them;
- (iii) any exhibits that will be used to summarize or support them;
- (iv) the witness's qualifications including a list of all publications authored in the previous 10 years;
- (v) a list of all other cases in which, during the previous four years, the witness testified as an expert at trial or by deposition; and
- (vi) a statement of the compensation to be paid for the study and testimony in the case.

Of the above requirements, plaintiff has arguably only satisfied subpart (iv).

Moreover, Federal Rule of Civil Procedure 37(c)(1) states that if a party fails to provide information as required by Rule 26(a), the party is not allowed to use that information to supply evidence on a motion, at a hearing, or at trial, unless the failure was substantially justified or is harmless. Contrary to the above rule, in the instant matter, Dr. Babu has failed to provide an analysis of whether or not plaintiff's condition pre-existed the motor vehicle accident in whole or in part, and therefore did not provide any basis for his conclusion that "To the best of my ability, I feel there is a causal relation between the accident and the current condition." (See Exhibits, "C, D and E").

Moreover, Dr. Babu has failed to provide an opinion as to whether or not plaintiff's post surgical condition is permanent, despite having issued a two post surgical reports (See Exhibits "D and E").

Pursuant to Perkins v. Origin Medsystems Inc., 299 F. Supp. 2d 45, 52 (D. Conn. 2004) the proponent of expert testimony has the burden of demonstrating by a preponderance of the evidence, that the testimony is competent, relevant, and reliable. (citing Koppell v. New York State Board of Elections, 97 F. Supp. 2d 477, 479 (S.D.N.Y. 2000)).

If the expert is deemed competent (otherwise referred to as "qualified"), the trial court must then determine, pursuant to its "gatekeeping" function, whether the proffered expert testimony is "relevant" and "reliable." See Advisory Committee Notes, 2000 Amendments, Fed. R. Evid. 702 (noting that trial judges have "the responsibility of acting as gatekeepers to exclude unreliable expert testimony").

Evidence is relevant if the testimony "has any tendency to make the existence of any fact that is of consequence to the determination of the action more probable or less probable than it would be without the evidence." Amorgianos v. AMTRAK, 303 F.3d 256, 264 (2d Cir. 2002) (citing Campbell v. Metro. Prop. & Cas. Ins. Co., 239 F.3d 179, 184 (2d Cir. 2001) (quoting Fed. R. Evid. 401)); Daubert v. Merrell Dow Pharmaceuticals, 509 U.S. 579 at 591 (1993).

"Expert testimony usually is necessary to establish a causal connection between an injury and its source unless the connection is a kind that would be obvious to laymen, such as a broken leg from being struck from an automobile." Tufariello v. Long Island R. Co., 458 F.3d 80 (2nd Cir. 2006) (quoting Simpson v. Northeast Ill. Reg'l Commuter R.R. Corp., 957 F. Supp. 136, 138 (N.D. Ill. 1997)). Furthermore, "[w]here an expert employs differential diagnosis to "rule out" other potential causes" for the injury at issue,

he must also “‘rule in’ the suspected cause, “ and do so using scientifically valid methodology. Ruggiero v. Warner-Lambert Co., 424 F. 3d 249, 254 (2<sup>nd</sup> Cir 2005).

In the instant matter, Dr. Babu, as plaintiff’s medical expert, must specify the injuries allegedly sustained by plaintiff and casually relate them to the accident. However, to date, he has failed to issue a narrative report which does so “within a reasonable degree of medical probability.”

Instead, Dr. Babu concluded that “To the best of my ability, I feel there is a causal relation between the accident and the current condition.” (See Exhibits “C”, “D” and “E”). Read closely, the foregoing language amounts to nothing more than a guess or net opinion.

Alternatively, if Dr. Babu’s testimony regarding plaintiff’s alleged injuries and causation is deemed admissible, then defendants request that it be limited. Specifically, Dr. Babu should not be allowed to testify regarding plaintiff’s post-surgical permanency. (See Exhibits “D” and “E”).

### **III. CONCLUSION**

**III. CONCLUSION**

WHEREFORE, the Defendants, Richard K. Bawuah and Cowan Equipment Leasing, respectfully request that the Court issue an order granting the Defendants' Motion in Limine excluding, or in the alternative, limiting the testimony of Ramish K.Babu, M.D., at trial.

RE: Lee, Dionne  
Claim #0204923790101623  
D/A: 5/9/07  
Date of Exam: 9/28/07

**HISTORY:** I had the pleasure of examining Dionne Lee on 9/28/07 for neurosurgical consultation. I have done the complete evaluation of this patient including history and physical examination and review of systems as well as the review of the radiological studies. Dionne Lee is a 43-year-old patient who was injured in a motor vehicle accident on May 9, 2007 when she was hit by a truck. She complains of neck pain, inability to move the neck since that time and back pain. She has tried conservative management including physical therapy, chiropractic management and non-steroidal anti-inflammatory medications, but it is not helping her. The patient was here to seek my opinion as far as further management is concerned.

**MEDICATIONS:** The patient is currently on non-steroidal anti-inflammatory medication as necessary.

**SOCIAL HISTORY:** The patient does not give a history of allergies.

**FAMILY HISTORY:** None contributory.

**PAST MEDICAL HISTORY:** None contributory.

**PHYSICAL EXAMINATION:** Revealed an adult female with complaints of neck pain, inability to move the neck since that time and back pain. The patient is awake, alert, and oriented times three. Pupils are equal and reactive. Extraocular movements are full. There were no deficits found in cranial nerves II through XII. Speech and mentation are normal. On examination, neck movements are severely restricted. Any amount of neck

New York University  
A private university in the public service

movement will produce excruciating pain going down the bilateral upper extremities. The plantars are down going. Sensory and vibratory sense is normal. Cerebellar examination revealed normal coordination and gait. The MRI of the cervical spine demonstrates a disc herniation at C5-6 and the MRI of the lumbar spine demonstrates a disc herniation at L4-5 and L5-S1. I have advised her to have a cervical spine surgery. she is going to schedule the surgery.

**CAUSALITY:** To the best of my ability, I feel there is a causal relation between the accident and the current condition.

Sincerely,

Ramesh P. Babu, MD

**Patient Name: Dionne Lee**

**Dear Sirs:**

I had the pleasure of seeing Ms. Lee in the office. As you know, she is a 43-year-old lady who was involved in a car accident on May 9, 2007. She was hit by a truck. She has complaints of neck pain and inability to move the neck since that time. She also complains of back pain. On examination, she has severely restricted neck movements. Any amount of neck movement will produce excruciating pain going down the both upper extremities. MRI shows C5-C6 herniated disc. Lumbar spine shows disc disease at L4-L5 and L5-S1. She tried physical therapy and acupuncture, but nothing has helped her. At this time, I have advised her to have cervical spine surgery. She is going to schedule the surgery.

If you have any questions, please call us at (212) 263-7481.

Sincerely,

**Ramesh P. Babu, M.D.**
